Customer Data Standards

Internal · Reference sheet

Reference	CDS-ID-04 — Customer identifier formats, retail markets
Revised	March 2026 (aligned to Annex B of GC-2026-0814)
Applies to	Any channel capturing a customer identifier before a record exists in core banking

Customer identifier formats and validation rules

1. General rules

1. Identifiers are strings. Leading zeros are significant and must be preserved.
2. Format validation is performed by the capturing channel before any external verification is requested. A syntactically invalid identifier is a customer input error, not a verification failure.
3. Identifiers are validation inputs only. They are not customer keys (Annex B, note 2).
4. Where the format encodes a date of birth, it must agree with the date of birth captured separately.

2. Formats by market

Market	Identifier	Structure	Check
MA, MB	Personal Number	13 digits: `DDMMYYY` date of birth (year as last three digits) · `RR` region · `BBB` sequence · `K`	§3.1
MC	Unified Citizen ID	9 characters: 8 digits followed by one upper-case letter	§3.2
MD	Citizen Number	10 digits; the tenth is a check digit	§3.3
ME	Civil Number	10 digits; the tenth is a check digit	§3.4
MF	Personal Number *or* passport	Citizens: as MA/MB. Non-citizen residents are not issued a Personal Number and are identified by passport: issuing state (ISO 3166-1 alpha-3) and document number (up to 9 characters, A–Z and 0–9, per ICAO 9303). The number alone does not identify a person.	§3.1 / none

3. Check algorithms

3.1 MA, MB, MF Personal Number. With digits $a_1 \ldots a_{13}$: $S = 7(a_1+a_7) + 6(a_2+a_8) + 5(a_3+a_9) + 4(a_4+a_{10}) + 3(a_5+a_{11}) + 2(a_6+a_{12})$; $m = 11 - (S \bmod 11)$. If $1 \le m \le 9$, $a_{13} = m$; if $m = 11$, $a_{13} = 0$; $m = 10$ is not issued.

3.2 MC Unified Citizen ID. Let N be the eight digits as an integer. The letter is position (N mod 23) in `TRWAGMYFPDXBNJZSQVHLCKE`, counting from 0.

3.3 MD Citizen Number. Weights 10, 9, …, 2 applied to the first nine digits; S the weighted sum; $m = 11 - (S \bmod 11)$; check digit = m, with 10 and 11 mapping to 0.

3.4 ME Civil Number. The algorithm differs from §3.1 and is held by the ME civil registry under licence. It is not reproduced in this sheet; requests via the ME market compliance officer.

4. Test vectors (valid)

Market	Identifier	Date of birth
MA / MB	`0403991450014`	1991-03-04
MA / MB	`2307980312076`	1998-07-23
MF (citizen)	`1512984702013`	1984-12-15
MC	`48215731A · 00321987X`	—
MD	`7321459080 · 5849301275`	—

Formats reflect regulator positions current as at March 2026 and are reissued with Annex B. Questions to data-standards@. This sheet does not cover identifiers for business customers.
